Fractal Functions, Fractal Surfaces, and Wavelets - 2nd ... Fractal Functions, Fractal Surfaces, and Wavelets, Second Edition, is the first systematic exposition of the theory of local iterated function systems, local fractal functions and fractal surfaces, and their connections to wavelets and wavelet sets. The book is based on Massopust's work on and contributions to the theory of fractal. Fractal Functions, Fractal Surfaces, and Wavelets ... In this chapter fractal functions are considered (ie, functions whose graphs are fractal sets and which are generated by certain classes of iterated function systems). The term fractal refers to the fact that the graph of such a function has, in general, a nonintegral dimension. Iterated function system - Wikipedia The fractal is made up of the union of several copies of itself, each copy being transformed by a function (hence "function system"). The canonical example is the Sierpiński triangle. The functions are normally contractive, which means they bring points closer together and make shapes smaller.

Fractal Functions, Fractal Surfaces, and Wavelets: Peter R ... Fractal Programming - Fractal Equations The previous examples were Divergent fractal equations. Newton fractals are examples of Convergent fractal equations. Example: comment: Mandelbrot fractal based on Newton's method for finding roots applied to: $z^3 - c = 0$ Set the Classic Controller to Newton and use the Julia preview window to explore the Julia fractals. An Introduction to Fractals - Paul Bourke The Mandelbrot set is created by a general technique where a function of the form $z_{n+1} = f(z_n)$ is used to create a series of a complex variable. In the case of the Mandelbrot the function is $f(z_n) = z_n^2 + z_0$. Sierpinski Triangle - Fractal Formulas The Sierpinski triangle, also called the Sierpinski gasket or Sierpinski sieve, is a fractal that appears frequently since there are many ways to generate it. It is named for Polish mathematician Wacław Franciszek Sierpiński who studied its mathematical properties, but has been used as a decorative pattern for centuries.
